A: There are two issues You didn't download the.dll in the directory of your wizzard There's no installer for your.dll But there's a solution Download the MSI for FWSim from the Internet (It should be stored in a zip archive). Download the.dll from your wizzard/FireWorks/Programs/Windows/FWSim/Repository/ Copy the.dll into your Application folder. Also copy the.ini and.rc in your application folder. Also download and copy the installer from the internet. Now copy the wizzard into your Application folder Launch Wizzard Open the Options Window Click on the "Program" tab Select the "List of programs" checkbox Select the "Add program to list" checkbox Click on "Browse" Find your MSI Click on "Add" Reboot your PC Reopen the wizzard Open the "Program" tab Select the "List of programs" checkbox Select the "Remove program from list" checkbox Click on "Delete" Reopen the "Applications" tab Select the.dll (This is the name of your.dll) and click on "Add" Close the wizzard Open your USB stick Copy the wizzard (Also the.dll) Reboot your PC Launch your Wizzard. If everything went as expected you'll find the.dll (Same name as your first.dll) and the.ini and.rc in the directory of your wizzard and the installer (same name as the.exe of your MSI). Unzip your.exe Reboot Open the "Application" tab Select the "FireWorks" and click on "Show Installed Programs" You'll find your.dll in the directory of your wizzard. You can delete it now if you want. Good luck em = 14) and in post-menopausal women (n = 6) [@pone.0114696-Jayani1]--[@pone.0114696-Fuss1]. Although PMK plays a role in the control of phospholipid degradation at the cell surface, its exact mechanism is not well understood, and previous studies have been limited to \*in vitro\* experiments. Our current findings that PMK-mediated conversion of LPA to LPA-1-OH represents a potential regulatory step 570a42141b
