## Hyun IPTV [Mac/Win] [Latest-2022]

This is a 1.03 alpha release of a simplified (and from memory) Ipv4v5 based remote administration console for managing and monitoring IPTV streamers, including picoTv, TVY+, and other platforms. My objective is to build a simple tool that is easy to learn, easy to use, highly configurable, and applicable to any environment. So far the code is fairly stable, but it has lots of bugs. If you have technical skills (C, Perl, HTML, CSS, Javascript, Unix, Linux etc), please use your Developer account at to report bugs. Features: - Handling of Telstra IPTV Version 3 streams, and UPnP/DLNA networks. - Documentation and tutorials. - Overview of the recorded programs as well as individual programs, and overview of the recorded programs as well as individual programs for each channel. - Miscellaneous functions to perform scheduled tasks and extract information from the stream. - Configuration templates in a text format. - Console output in xml/html format. - JavaScript embedding of YouTube for video viewing. - Network-based program switching. - Program timers. - Temperature and other meta data such as channel version and memory usage can be extracted from the stream. - Supports IPTV 1.x version streams. - Supports UPnP/DLNA networks. - Uses HTTP for program data retrieval. - Supports channel catalogs. - Stops, restarts, and pauses the program as well as transitions to other channels. - Removes program listings such as advertisements and TV guide from the live stream. - Configurable options with web page-like interface. - Very simple configuration file format. - Extensibility. - Configurable URL for remote installation. - Optional encryption, SSL certificates, and SNI. - Well-tested. - Tested on Windows XP, Vista, and Windows 7. - Hybrid binary format cross platform file. (The Windows builds are 64bit, Windows 2008 builds are 32bit.) - Various issues with Windows have been fixed. Windows 7 has some issues with code signing. - Integrated copy protection does not work. - Recording of one channel does not work. - Version 1.x and 2.x streams only, no 3.x. - Supports Telstra IPTV and Technicolor (Tivo-like) IPTV.

## What's New In Hyun IPTV?

Hyun IPTV is an an easy-to-use, cross-platform IPTV client program that works in Australia. The application supports H264 and might not work if you are located in a different area.
