- compile SQL statements as Databases - allows you to execute SQL queries - allows you to manage SQL queries - provides an easy way to import SQL queries - provides visualization of the schema of the selected SQL database A: You can use ssms Edit Sorry I didn't read all your question... SQL Server Management Studio is a great tool. It is free and very powerful. You can import SQL files and perform query in real time. For specific question, you can see manual here. A: To save and run, use the file format ssa To build and save, use the file format ssasql To import data from a text file, use the file format dt To import data from a delimited text file, use the file format dtsql Since you are asking about SSMS, you may want to read SSMS For Dummies. Q: MongoDB query documents by collection I'm trying to find out which companies have invested in which country. The problem is that the document are not in the same collection and I need to query all the data in the mongodb. I would use a query like this one : db.companies.find({ "Country": "France" }, { "Country": "Lithuania" } ) This query works well, But if I have a company that invest in Spain, is there anyway to find out which country is invested in and do a query like this? db.companies.find({ "Country": "France"
