You can find more info on The following guide will show you how to repair corrupt videos. Step 1: Open the application In case you do not know how to open an application, then it is worth mentioning that MP4XtraAtomRemover is based on JAVA. Therefore, you would need to install Java first, and then run the application. Step 2: Select the videos that you want to use The program has the ability to open the tool in a file manager, so you can choose a folder with the video clips that you want to repair. Then, you can press the Start button to begin the repair process. Step 3: Repair and preview the corrupted video Once you hit the Start button, then you will be presented with a progress bar. The scanning process can take as much as several hours, depending on the size of the clip. The software will start the process by extracting the file metadata, including the MP4 metadata field that needs to be repaired. After that, it will look for the proper solution to remove the extra field from the file. In the event that it fails to do so, then it will display a message indicating that the file cannot be repaired at the moment. Step 4: Preview the repaired file Once the repair process is complete, then you will have the option to save the new file into the selected folder. Please keep in mind that the file is saved with the same name as the original one, but it also includes a _repaired file in the extension. For instance, a video that was named Giant Bomb.mp4 is going to be saved as Giant Bomb.mp4_repaired. In case you are ready to take things to the next level,
