Figure 5-7: The Photoshop program provides numerous tools for image manipulation.

****Figure 5-7:**** Photoshop's interface provides many ways to

manipulate images. Photoshop has many tools that enable you to easily manipulate images. You can enhance, create, and prepare photographs; crop photos; remove unwanted objects and features; create text and illustrations; alter color; and make selections. Figure 5-7 shows the interface for the program. This chapter introduces you to the basic tools that you can use to make your images look their best. # Auto-

Adjusting The Auto-Adjust Layer Adjustments pane enables you to adjust color and brightness, and sharpen, soften, or lighten images. ## Adjusting Color If you use the Adjustments panel to change the white balance, you typically need to monitor how the white balance changes and then make any adjustments before saving the image. However, Auto-Adjustments allows you to make changes to color in the

background to increase or decrease the overall color (Figure 5-8). **Figure 5-8:** Auto-Adjustments provide easy color adjustments. After you create a new Layers panel, you have the Auto-Adjustments panel displayed by default. Choose the Auto-Adjustments panel tab from the panel's tab drop-down menu. The Adjustments panel, shown in Figure 5-9, appears. **Figure 5-9:** You can access the

Adjustments panel from the Layers panel. The Adjustments panel contains these two sections: * **Auto:** * This section enables you to make changes to the white balance and color balance. * **Auto Mask:** * This section enables you to automatically create an adjustment mask around elements that you want to preserve.

There are some Photoshop alternatives including PictoPic and IrfanView. But there is no comparison between these programs and Photoshop, in terms of features. In the following list, I have compared all the features of Photoshop and Photoshop Elements. Please note that this post only includes feature comparisons and does not compare Photoshop Elements and Photoshop.

What's New In Adobe Photoshop 2021 (Version 22.4)?

The Brush features allow you to paint with a brush or paint bucket. This tool is also useful for painting colors and patterns into your images. The Pen Tool is designed to draw by hand. It allows you to draw fine detailed

paths and lines with different colors and textures. Brushes in Photoshop Brushes allow you to paint in an image. When you paint with the Brush tool, you paint with layers. Each layer can be either transparent or opaque. These layers are similar to the traditional layers in an image. You can paint with the layer at any time to create effects, such as grayscale painting. The first Brush tool setting gives you several preprogrammed options.

You can paint with a brush shape, move the Brush tool, view the Brush tool, or change the size of the brush. The Thickness and Pressure controls also allow you to change the softness of the Brush tool. After you paint with the Brush tool, the changes appear on the canvas. You can see the Brush tool, as well as the state of the edges of the Brush tool. In Photoshop CS6, you can see the Brush tool and the state of the

edges. Paint with a brush The next section shows you how to use brushes to create various different effects. You can paint with different Brushes in this section. Some of the different types of Brushes are highlighted in blue. Creating a brush You can create a new brush by either pressing the plus sign (+) on the Brush tool, or by choosing the New Brush button on the Brush tool Settings dialog box. This dialogue box is available by

choosing More Tools/Brushes, as shown in the figure. Before you create your new brush, you need to choose the brush type and the brush style. Choosing the brush type To choose a brush, click on the Brush Type button, as shown in the figure. The list of available brushes will be displayed on the drop-down window. You can change the width of the brush by clicking on the size button at the bottom of the window. You can select

additional brush settings and apply to the new brush by choosing from the Brush Settings dialog box. You can make the brush larger by selecting it, and dragging the border. You can make the brush smaller by selecting it and dragging the background. You can also create a custom brush by dragging a selection. In that case, the Brush Settings dialog box will appear
