FIFA is a video game franchise, originally developed by EA Canada and published by EA Sports that is named after the English word for football. Initially available on the PC, the original FIFA game focused on an overhead view, allowing the player to view the virtual pitch in action from a birds-eye perspective. The game, developed by EA Canada and published by EA Sports (formerly Infogrames), was one of the first sports games to feature the use of licensed players, coaches, stadiums, and federations for accurate simulation of real-world games. The series has also developed a strong esports community, and over a decade after the first release of the game, the FIFA franchise has released 19 sports games, including FIFA 19, the last of which was released on Sept. 28,

2018. Read IGN's FIFA 19 review. FIFA 20 was originally announced to be published by EA Canada, but on March 13, 2019, the franchise was announced to be moving from EA Canada to EA Sports. FIFA 20 got a lot of upgrades. The biggest and most noticeable change is the stadiums and pitches you play on. The stadiums have more detail, the pitches are filled with more actual grass, and certain players look and feel more realistic. The mechanics of FIFA 20 are also closer to the original FIFA, with ball contact and collisions being just as accurate as they were in the original. FIFA's gameplay modes are also much more balanced and feature added depth, with tactical modes and the ability to take a more active role in the game. The FIFA 20 Demo is scheduled to release on Xbox One, PlayStation 4, PC, Nintendo Switch, and Stadia on Sept. 26. The features in FIFA 20 will be familiar to fans, but there are still a few big changes. First, FIFA 20 uses EA's in-house Frostbite engine, instead of the Unreal Engine used by previous games. The Frostbite engine produces a very realistic atmosphere for the game and lends itself to the game's visuals more than Unreal Engine. The stadiums in FIFA 20 have much more detail and look even more accurate than the stadiums in FIFA 19. It's also the first FIFA to feature Dribbling Control, a feature first seen in the MLS Game of the Year Edition of FIFA 18. With Dribbling Control, you can slow down players in possession, control the direction of their dribble, and more accurately determine where they are going to pass. The feature has also made its way to the PES
