so i did something bad, i installed photoshop cs6 thinking that it would replace the cs3, but now i cant open the cs6 anymore. i tried uninstalling it but it wont let me. a pop up says that i have to make a backup, but if i cant open the software then how do i do this? when i try to open the.app file, it says 'there was a problem with the application'. i tried renaming it to.swp and it says 'the file photoshop is not available because the application was unable to validate the digital signature of the application.' how can i fix this? install photoshop cc 2017 or earlier, and you can still assign a scratch disk. photoshop will not display an error, but it will continue to work, even if a scratch disk is not present. there may be a scratch disk settings dialog box you can open by pressing the command and option keys as photoshop starts up; that will list an apfs boot drive (as startup, not as its volume name), and appear to allow it there. it may mean photoshop is using the apfs boot drive anyway, but its not reporting it properly in the scratch disks section of the preferences dialog box. download the installer for photoshop cs6 and install it. (you can also update to the latest version if you already have it installed and running.) when you launch photoshop, you should be able to choose the new version in the creative cloud creative suite update section. this option will be greyed out if you have the older version installed, as you would have to uninstall the older version first. if you have a large number of photos open, then you should have your photos open in separate windows. if you get photoshop cs6 to recognize them as a single open window, then photoshop will try to load all the files from the single window into a single document. this is not the behavior you want. if you have a large number of photos open, you should have your photos open in separate windows. 5ec8ef588b
