Remember that anyone with an iPad (or Mac or Windows tablet, with its Office 2016 update) can work on a file that has been shared with you, as long as you have the right software. While you can't upload your creations to the cloud or share them directly, you can give the file a name that includes what you want people to remember about it, like a family birthday or wedding anniversary. That way you can invite the person to edit it by clicking on the file's name. You can even use a special URL link to update the photo with your own message. Elements maintains the fundamentals of the previous version, and it has some new features, including the built-in partial batch corrections. Other advancements include a quicker Filmstrip view, export to more devices and ways to improve image quality. Now you can save still images and videos directly to Dropbox. In Elements 2020 you could already save videos to the cloud, as well as to a Google Drive folder. But now you can also save them to Dropbox, so that someone in a place with a fast Internet connection can consult your work. Editor Doug Orland has also enabled ten new and updated filters, and it looks like you can add collages to layers to create images. You can work from scratch without switching to the Filter Bucket menu.

There you go. These are the features and tools that need to be considered while deciding the purchasing of a graphics tool - for both 2D and 3D users. This may widen the gap between average users of the tools and the artists, the designers, and the developers who are targeted by these sub-par prices. And silence in this discussion can also be a silent confirmation that Adobe has not paid attention to this, considering that they have ignored the community recommendations and provided a tool set that is lacking features and products targeted for the masses. Flaws in tools are ignored or not considered serious when they do not affect the tools usage and workflow. Some have even identified this in the Adobe Photoshop as a feature. Adobe has also changed the tutorials of their products, making them inaccessible due to licensing issues. One of our readers, a digital artist from Germany, who shall remain unnamed, has recently moved from Adobe Lightroom to Corel Painter 2019 where he feels much more comfortable. He also reported that he does not use Photoshop much, due to the fact that he can work faster in Painter - because of the design templates provided by Corel Pro. At least I can't speak for other products due to some licensing issues. However, one of my last job had to work with a lot of EXR images, and these had to be exported for Kornelius to be used with 3D software - and I love the way it was and the performance did what it was meant to do.
